8	EXPOSURE CONTROLS/PERSONAL PROTECTION
8.1	Control parameters Follow workplace regulatory exposure limits for all types of airborne dust (e.g. total dust, respirable dust, respirable crystalline silica dust) The WEL (Workplace Exposure Limit) for respirable crystalline silica dust is 0.1 mg/m ³ in the UK, measured as an 8 hour TWA (Time Weighted Average). For the equivalent limits in other countries consult your local regulatory authority.
8.2	Exposure controls
8.2.1	<i>Appropriate engineering controls</i> Minimise airborne dust generation. Use process enclosures, local exhaust ventilation or other engineering control methods to keep airborne levels below the specified exposure limits. If user operations generate dust, fumes or mist, use ventilation to keep exposure to airborne particles below the exposure limit. Apply organisational measures, e.g. by isolating personal from dusty areas. Wash hands before breaks and at the end of the day. Remove and wash soiled clothing
8.2.2	<i>Individual protection measures such as personal protective equipment</i>
a)	Eye protection Safety glasses with side shields. Use equipment for eye protection tested and approved under appropriate standards.
b)	Skin protection No specific requirement. For hands see below.
c)	Hand protection Appropriate protection (e.g. gloves, barrier cream) is recommended for workers who suffer from dermatitis or sensitive skin. Wash hands at the end of each work session.
d)	Respiratory protection In case of prolonged exposure to airborne dust concentrations, wear respiratory protective equipment (e.g., respirator, powered air respirator) that complies with the requirements of European or national legislation.
8.2.3	<i>Environmental exposure controls</i> Avoid wind dispersal
